### RELEASE NOTES FOR VERSION 0.9.7.3 (12-15-2018)

While every effort has been made to ensure that all features currently enabled in this release operate as intended, Hermann10 is still under development. A few additional refinements are planned for a future release, so users are encouraged to check periodically for updates.

#### (A) DOWNLOAD AND INSTALLATION

(1) Download the compressed .zip archive for your operating system (Mac or Windows):

[http://choca-assessments.com/Hermann10\\_Mac\\_0.9.7.3.zip](http://choca-assessments.com/Hermann10_Mac_0.9.7.3.zip)

[http://choca-assessments.com/Hermann10\\_Win\\_0.9.7.3.zip](http://choca-assessments.com/Hermann10_Win_0.9.7.3.zip)

(2) Double-click the .zip archive to uncompress the folder that includes the program and supporting documents. (Note: Mac users may be required to option-click on the application and choose “Open” from the contextual menu in order to bypass the GateKeeper restriction on apps downloaded from the internet. See the addendum posted below.)

(3) Move or copy this program folder to your Applications folder.

(4) The first time you run Hermann10, the application will create and install a subfolder named “Hermann10 DataFiles” in your Windows or Mac Documents folder. This is where Hermann 10 saves the client datafiles (.hrm10) and the MS Word-formatted (.docx) reports that it creates.

*Note:* If you’ve previously installed an earlier version of Hermann10, any existing “Hermann10 DataFiles” folder (and its contents) in your Windows or Mac Documents folder will remain untouched.

(5) The first time you run Hermann10, you also will be asked to create a Preferences file into which you enter the Examiner name that will be displayed in the reports. Thereafter Hermann10 will retrieve this information and include the Examiner name in the MS Word reports.

*Note:* If you’ve already installed a previous version of Hermann10, your Preferences file will remain unchanged and should not require you to reenter your personal information.

## **(B) HERMANN 10 TUTORIAL**

We have prepared a video tutorial to guide clinicians step-by-step through the procedure to follow when using Hermann10 to administer, score, and generate test reports. Although the specific instructions provided to clients when administering the test may differ according to one's preferred system (e.g., CS vs. R-PAS), Hermann10 is flexible enough to accommodate the scoring and evaluation of clients' responses. The guided tutorial is available here:

<http://choca-assessments.com/Rorschach>

## **(C) ADDENDUM FOR macOS USERS: GateKeeper Security Issue**

Recent versions of macOS block opening an application downloaded from the internet unless the author has purchased from Apple and embedded in the app an unique signature code.

Hermann10 for Mac is not yet a signed application. Still, it is currently a simple matter to bypass the GateKeeper block:

(a) Control-click on the Hermann10 application and select "Open" from the dropdown menu

(b) You'll still get a warning, but clicking the "Open" button will make the Herman10 application permanently available without any further warnings.

## **(D) FEEDBACK**

In order to contribute to improving Hermann10, please forward any comments or bug reports to the author and/or programmer:
